

Our Strengths

Extreme sensitivity to deadlines and costs

Complete coverage of all technologies on all platforms

Very short turn-around time to client requests

Ability to leverage the experience gained in numerous projects to act proactively

Staffing Solution at its best

Amplify Systems is a global technology solutions company with interests in consultancy, software development, outsourcing and staffing. We offer a complete portfolio of services for the industries we serve. We offer services to many different industries, and our clients span a broad spectrum in terms of revenue, project time and project size. We believe in the convergence of business experience, business strategy and technology to design and deploy business solutions. To support this belief, we have created several business, development and process models. Our models leverage existing strengths to protect your investment in manpower, machines and data without compromising on quality and speed. We have also created several specialized, complete teams that are specially trained to apply these models. The teams comprise business and technical analysts, certified software quality analysts, domain specialists, managers, researchers and programmers that develop software solutions for most business needs.

Our in-house management and software quality specialists constantly research and refine our models and our human resources are constantly trained on these models. The knowledge internalization model has been designed to empower our people without disrupting any ongoing projects.

Trend Setters in IT Consulting
